

Tentative Syllabus for Physics 220: Spring 2014

Professor: Dr. Stuart Hutton

Office: Derby Center: 248 Research Lab: Derby 219: General Physics lab: 148

Phone: 870 307 7560

Email: stuart.hutton@lyon.edu

To access the Physics Gateway: <http://hutton.lyon.edu>

During class periods and during tests: cell phones are to be switched off.

Office Hours

I will schedule several office hour blocks. I will be very close to my office or research lab during these times. Otherwise, I will usually be close to my office or research lab. If you want to find me outside of office hours, make an appointment so that you will be sure to find me. My schedule is located on the physics home page which you may review to determine office hours.

Grading

As a general guide to grades, grades will be assigned as follows:

100-90]	(90-80]	(80-70]	(70-60]	<(60
A	B	C	D	F

In this course, you will have several grading opportunities, tests, homework and in-class problems. The various weight of each of these activities in your final point grade is shown below. **Late assignments will normally not be accepted. Additionally, since we will be doing in-class problems, poor attendance will negatively affect your grade: in particular, you will not receive credit for class participation for unexcused absences. There are no make-ups for in-class worksheets.**

Tests (4 tests and 1 [comprehensive] final exam)=85%

Each test is worth 17% of your grade.

Homework / in-class problems/ class participation=15%

Note: Physics Lab (Phy251) is a separate course.

The grade in Phy251 has no impact upon the grade in Phy220.

Your work on tests will be graded for correctness and clarity. **Failure to supply details leading to a result will result in very little credit for a problem.** If you want full credit for a problem, **you must** supply the logical steps that led to the result and the result **must include proper units.** Diagrams should be included where appropriate to define quantities used in your result. Homework and worksheets will be graded for completion.

Course Description

In this course you will be exposed to fundamentals of physics. Among the topics that we will cover are Electrostatics, Magnetism and Optics. Refer to Assessable Learning Outcomes for a more complete presentation of topics.

Course Objectives

As a consequence of this course, you should obtain an enhanced understanding of the fundamentals of physics. In addition, you should come away from this course with an ability to solve fundamental problems involving physical principles.

Course Prerequisites

You are expected to be proficient with algebra and trigonometry. It is strongly recommended that your life will be made easier if you review trigonometry.

Text

The textbook in this course is:

Physics 220:Physics, 8th Edition, by John D. Cutnell, Kenneth W. Johnson ISBN 978-0-470-22355-0

The schedule is designed around this particular text edition. You may use earlier or later editions but you will need to be sure to read the correct portions of the text. The text must be considered to be a very important resource so students are expected to be reading along in the text as the course progresses. Reading assignments are provided on the master schedule and are considered part of the standing homework assignment.

You have many resources on the campus: the library, your colleagues and your professor. Your prime learning resource, however, must be considered to be the classroom: **punctual and complete** class attendance is expected. **Absences will negatively impact your final grade. Tardiness is considered to be an unexcused absence and will negatively impact your final grade.**

Attendance

The Lyon College Catalogue for 2013-2014 states:

Students are expected to attend all class periods for the courses in which they are enrolled. They are responsible for conferring with individual professors regarding any missed assignments. Faculty members are to notify the Registrar when a student misses the equivalent of one, two, three, and four weeks of class periods in a single course. Under this policy, there is no distinction between "excused" and "unexcused" absences. A reminder of the college's attendance policy will be issued to the student at one week, a second reminder at two weeks, a warning at three weeks, and notification of administrative withdrawal and the assigning of an "F" grade at four weeks. Students who are administratively withdrawn from more than one course will be placed on probation or suspended (see Academic Probation and Academic Suspension).

Academic Honesty

It is expected and encouraged that students in this class will work together on homework problems. If you use reference work, be sure to include proper references. On tests, students are required to keep notes and books closed except as instructed. Reference to material other than specifically permitted during a test is also considered to be an honor code violation. **Your professor will supply all the paper needed for the tests.** Any questions during tests should be directed to the professor only. **CELL PHONES AND OTHER WIRELESS OR NETWORKED DEVICES (INCLUDING COMPUTERS) MAY NOT BE USED DURING TESTS;** use of such devices during a test, is automatically be considered to be a violation of the Lyon College Honor Code.. **All graded work in this class is to be pledged in accordance with the Lyon College Honor Code.**

"Students seeking reasonable accommodations based on documented learning disabilities must contact the Dean of the Faculty at (870) 307-7332."

Withdrawal Deadlines

Last day to drop with no record of the course is 28 January 2014.

Last day to drop with a W is 24 March 2014.

Tentative Master Schedule: R.1 for Physics 220 and Physics 250 and Physics 251 Spring 2014

labs	Worksheet Number	Date	220: Cutnell: 8th ed. Assignment Reading : Homework	250: Serway 4th ed Assignment: Reading: homework

PHY 220 GENERAL PHYSICS II / 3 credits. Study of electricity, magnetism, light and optics using algebra and trigonometry. Prerequisite: PHY 210.

General Education Objectives (proposed)

Students can apply critical thinking to pose and answer questions..

Students can use the processes and methods of science and mathematics to demonstrate how reproducible results give rise to the discovery of fundamental laws and the development of theories.

Students can articulate a basic knowledge of current scientific understanding of the universe and the scientific and mathematical laws that govern it.

Students can summarize, interpret, analyze, and critically evaluate data and reports relating to the natural sciences and mathematics.

A non-exhaustive list of intended learning outcomes follows

- (a) Ability to understand electrostatic and magnetostatic units and definitions and conservation of charge.
- (b) Ability to obtain resultant forces through application of Coulomb's law.
- (c) Ability to perform algebraic analysis to find the net electrostatic force resulting from superposition of distributions of several discrete charges.
- (d) Ability to understand the connection between electrostatic force and electrostatic field, and to recognize the physical reality of the electric field.
- (e) Ability to obtain electric fields from application of Gauss's Law⁸ to regionally constant charge distributions.
- (f) Ability to understand electrostatic field maps and to be able to sketch such maps for simple charge distributions.
- (g) Ability to and perform calculations involving electrostatic potential energy and electrostatic work.
- (h) Ability to understand the connection between electric potential and electric potential energy.
- (i) Ability to understand and mathematically analyze the connection between electric potential and electric field in the case of potentials which vary linearly with position.
- (j) Ability to obtain the capacitance of a system from fundamental considerations and to expand this to cover linear dielectrics.
- (k) Ability to obtain the energy density and total energy of a parallel plate capacitor.
- (l) Ability to analyze the effect of electrostatic and magnetostatic fields upon the motion of a charged particle.
- (m) Ability to understand motion of a magnetic dipole in an external magnetic field.
- (n) Ability to obtain magnetic fields from simple current distributions using Ampere's Law.
- (o) Ability to perform calculations of induced magnetic field from Faraday's Law (including inductance, self inductance and mutual inductance).
- (p) Ability to obtain the magnetostatic energy density and total energy of an ideal solenoid.
- (q) Ability to perform calculations involving the following circuits: Series RC, Series RL, Series RLC. As part of this, students are required to be able to work with circuits where real impedances can be calculated¹⁰. Ability to apply Kirchoff's circuital laws¹¹.
- (r) Ability to perform calculations involving Snell's law for optics and to subsequently have the ability to understand chromatic aberration in actual lens systems.
- (r) Ability to perform thin lens equation calculations to obtain results related to the characterization of resultant image formation.
- (s) Ability to perform spherical mirror calculations to obtain results related to the characterization of resultant image formation.
- (t) Ability to perform multiple thin lens calculations to analyze simple optical systems.
- (u) Exposure to the theoretical basis for the thin lens equation, the spherical mirror equation, Snell's law and ray tracing.
- (v) Ability to recognize critical angle and Brewster angle applications and to perform calculations

with each and polarization effects.

(w) Ability to understand and perform calculations involving thin film interference.

(x) Ability to understand and perform calculations involving single slit interference, multiple slit interference and diffraction gratings. Ability to understand and perform calculations related to the theoretical basis for limitations of resolution powers of thin lenses and diffraction gratings.

(y) Exposure to the basis for the unification of electrodynamics, magnetism and optics based upon Maxwell's equations. Identification of the needed modifications to Ampere's law for electrodynamics and magneto dynamics (the displacement current).

(z) Exposure to the connections and continual reference to the basis for understanding the unification between classical electrodynamics, magnetism and optics (Phy220) and classical mechanics and thermodynamics (Phy210).
