## Physics 220: Unquiz 05

A wire of length $L=3 m$ has a current $I=2 A$ running towards the $+x$ direction. If the wire is in a uniform magnetic field in the $+y$ direction of strength $B=0.1 \mathrm{~T}$, calculate the direction and magnitude of the force on the wire. Show from fundamental definitions that the units are those of N . If the direction of the magnetic field were in the $-y$ direction, what would be the direction of the force? If the current were in the -x direction while the magnetic field were in the +y direction, what would be the direction of the force?

A wire of length $L=3 m$ has a current $I=2 A$ running towards the $+x$ direction. If the wire is in a uniform magnetic field in the $+y$ direction of strength $B=0.1 \mathrm{~T}$, calculate the direction and magnitude of the force on the wire. Show from fundamental definitions that the units are those of $N$. If the direction of the magnetic field were in the $-y$ direction, what would be the direction of the force? If the current were in the $-x$ direction while the magnetic field were in the $+y$ direction, what would be the direction of the force?

$$
\begin{gathered}
\vec{F}=|\vec{L} \times \vec{B}:|\vec{L}=|I L| \hat{x}: \vec{B}=|B| \hat{y}: \hat{x} \times \hat{y}=\hat{z} \Rightarrow \vec{F}=|F| \hat{z}:|\vec{F}|=I L B=(2 A)(3 m)(0.1 T)=0.6 N \\
{[A m T]=[A][L]\left[\frac{N}{A L}\right]=N} \\
\vec{B}=-|\vec{B}| \hat{y} \Rightarrow \vec{F}=-|\vec{F}| \hat{z} \\
|\vec{L}=-||\vec{L}| \Rightarrow \vec{F}=-|\vec{F}| \hat{z}
\end{gathered}
$$
